**How Do You Know If There Is Mold In Your House?**

- You can see it as dark patches or minute fuzz.
- You can smell it as a “musty” odor.
- The air in the space feels damp.
- Be aware of “hidden problems”: mold inside of walls, mold in air handling ducts, and mold in crawl spaces.

**Situations That Are Not A Problem**

- Mold in your refrigerator.
- Mold on you window sill.
- Mold in your shower.
- Mold on a removable item – (A cardboard box in the garage).
- Dust that looks like mold.

**Water Is The Problem - Mold Is The Symptom**

- Fix the moisture problem first.
- Schedule J & M Contracting, Inc. to assess the hazard and prepare an evaluation report.

**Remediation**

- Prevent airborne spores and dust from migrating to the rest of the house.
- Replace porous surface materials like wallboard, ceiling tiles, cloth etc., that have obvious mold growth.
- Clean hard surfaces, repair and repaint if appropriate.
- Take air and surface samples before and after remediation.

**Summary**

- Mold spores are everywhere.
- Water is the problem. Mold is the symptom.
- If there is mold, repair and replace contaminated areas.
- Test before and after remediation.
- Fear of mold can be larger problem than mold itself. Education is the cure.
